

C. Remarks

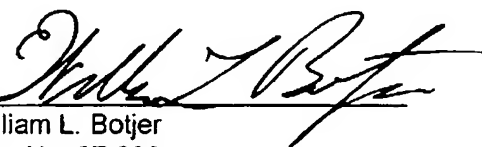

Turning first to the formalities, claim 2 has been amended so as to add a period and claims 11-16 have been correctly renumbered. This amendment should remove the objections.

Claims 1-10 were rejected under obvious type double the patenting, this rejection is respectfully traversed. It is submitted that the improved functionality of the use of storage phosphors in a high resolution microchannel imaging device makes it clear that such was not obvious from applicants prior work in this area.

Applicants gratefully acknowledge the notification of allowable subject matter of claims 11-16.

It is respectfully submitted that the claims are now clearly patentable over the art of record, and notice to that effect is earnestly solicited, If the Examiner has any questions regarding this matter, the Examiner is requested to telephone applicants attorney at the numbers listed below prior to issuing a further action.
